

Supply Support Request (SSR) Processing

SSRs are a request by CECOM to be a user of a consumable item managed by another service or agency. Included in the process are the cataloging actions which record user interest, assign management data and review/accept substitutes offered. DLIS-KAE monitors, coordinates, prepares and submits SSRs for provisioned items. Technical data is submitted to DLIS if not previously submitted. We process all cataloging actions associated with SSR/recording of user interest on Army managed items.
